

# Portal Integration with ProClarity

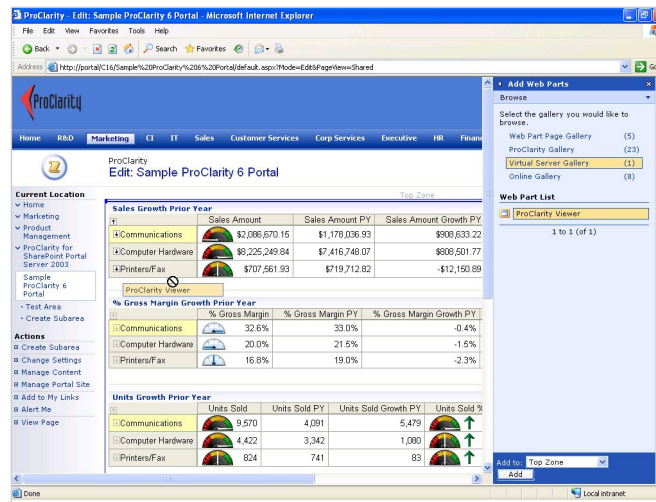

## Tailored Analytics Embedded with Ease

ProClarity analytic views can be seamlessly integrated into a portal environment without any custom development. Web parts or URLs are created to display ProClarity views in a portal. These views are centrally managed by administrators who control the content and amount of user interactivity.

making and propagates analytic best practices across the organization.

## ProClarity for SharePoint Portal Server

ProClarity for SharePoint Portal Server is a Web part that displays interactive ProClarity analytic views within a SharePoint Portal system. From the analytic view in SharePoint, end users can interact with the data and easily

## ProClarity for SharePoint Portal Server

ProClarity for SharePoint Portal Server displays analytic views in a SharePoint Portal. Users can jump into full ad-hoc analysis with a powerful, zero-footprint Web client.

In addition, rich ProClarity clients such as ProClarity Professional can be linked to any ProClarity view within a portal, further enabling users to move from monitoring a situation to understanding why. Embedding tailored analytics into portals helps improve decision

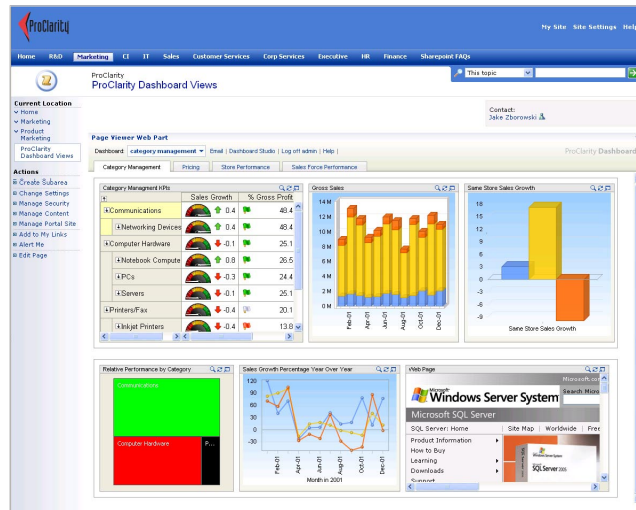

jump into full ad-hoc analysis in a powerful, zero-footprint Web client. ProClarity for SharePoint Portal Server enables IT, business users and analysts to publish meaningful analytic views to a portal without having to write any code.

## URL Addressability with the ProClarity Dashboard Server

A key feature of portal integration is URL addressability with the ProClarity Dashboard Server. All or parts of ProClarity dashboards can be assigned specific URLs for use in other applications, such as portals and Web pages. You can also integrate URL-addressable content from other sources, such as Reporting Services reports or search engines, into ProClarity dashboards.

Dashboard Server displays zero-footprint dynamic data views including key performance indicators, graphs and advanced ProClarity data visualizations like the patented Decomposition Tree. Dashboard Server is built on an open .NET architecture, requires minimal installation and fits seamlessly into your portal infrastructure. Simple on-chart navigation enables users to easily move from viewing information to conducting full, ad-hoc analysis in a ProClarity client.

## URL Addressability

A key feature of ProClarity Dashboard Server is URL addressability, making it possible to easily integrate all or parts of dashboards into applications, such as SharePoint Portal Server.
