Clarity Reporting:

Web-based and enterprise-wide

Clarity Reporting is a web-based, enterprise-wide reporting application that supports advanced analytical features and delivers highly formatted financial statements. With Clarity Reporting, users can:

- Create and distribute month-end financial statements
- Perform ad-hoc financial analysis
- Report on operational performance by customer, product, department and time period

Clarity Reporting's advanced analytical features enable users to slice and dice the data to quickly identify the key information necessary to support the business decision-making process.

A complete reporting package

Clarity Reporting uses a combination of OLAP and relational database technologies to create a complete reporting package. OLAP (or multi-dimensional) databases are best known for creating aggregations of relational information (i.e. General Ledger data) by way of reporting cubes. Like a pivot table, Clarity Reporting's OLAP technology allows users to interact with the data in their own way through drilling, slicing and dicing. Users can create their own reports without having to rely on IT for assistance.

Clarity Reporting's publish-ready report books and e-mail distribution allows organizations to quickly get information to any employee.
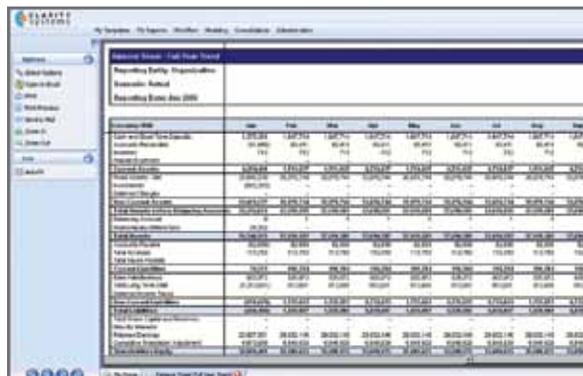

Create highly formatted boardroom quality reports.
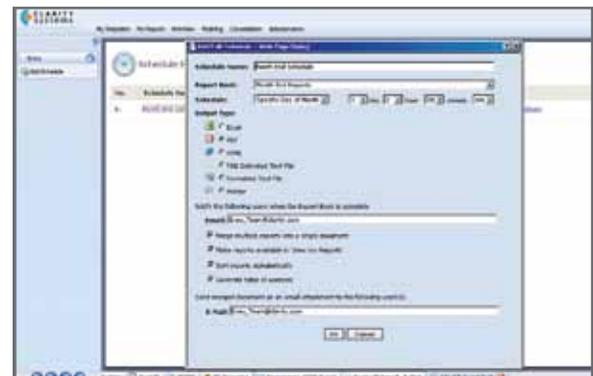

Assemble, schedule and automatically distribute individual or group reports.

CLARITY HIGHLIGHTS	OLAP	MS Excel-like interface	balanced scorecards	traffic lighting	detect & alert

Investigate and understand

Clarity Reporting's Detect & Alert, Balanced Scorecards and Traffic Lighting features highlight material variances to the responsible Managers. Clarity Reporting's drill through capability then allows users to investigate and understand variances by drilling down into the supporting details to see the actual transactions.

Share the same information

Clarity Reporting allows Managers to get the information when they want and laid out how they want it. Clarity Reporting ensures that all Managers who share access to the same business units see the same information.

Clarity Reporting eliminates the need for multiple reporting applications and the costs resulting from duplicating training, maintenance, and administration.
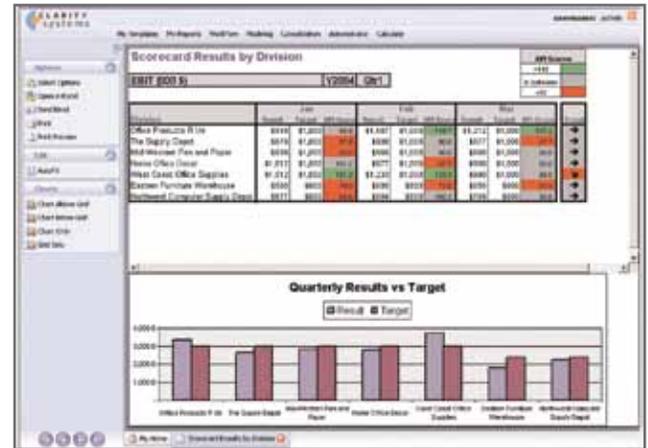

Use scorecards to measure and monitor organizational performance.

Clarity Systems Research Study:
Problems with Current Reporting

PROBLEM
1. ERP or general ledger package does not have integrated reporting solution
2. Reports are time consuming to create and in some cases require programming knowledge
3. Reports are intimidating to create and users often end up creating their own independent information sources
4. Lengthy query time
5. Reports are only set up to answer anticipated questions
6. Report books take hours or days to assemble properly
7. Reports cannot be easily distributed

CLARITY HIGHLIGHTS	boardroom quality reports	automatic report distribution	tight security	seamlessly integrate with your source systems
