

# Performance Canvas 2007

Traditionally the business user has only had the possibility to view and do limited drilldowns in the web and portal based Dashboard and Scorecard. DSP Performance Canvas extends what a business user can achieve without understanding the traditional "BI lingo"

## Over view

The Performance Canvas is built from the ground up to meet the demand for growing and widespread use of Performance tools throughout the organization. Have a look at what the new Performance Canvas does for the Business User, the Advanced Business User (or the Excel-Wiz) and the Business Intelligence Professional.

## Immediate value

For each user category using DSP will shorten the time-to-performance to its minimum, thereby improving the responsive of every part in the use of BI technology throughout your organization.

## Use it wherever you work

The different canvases bring BI into every part of your work. BI is now a part of your Microsoft SharePoint and Office experiences, as well as omnipresent in Web 2.0, for Mobile users and in your Enterprise Search system of choice for easy text search access.

## Action, Communication and Collaboration are key

Almost every task assigned to an information worker involves three phases - 1) Collecting the relevant information for the task, 2) Performing some intellectual work (often a collaborative effort) and 3) Performing some type of action as result of second phase - such action almost always involving communication and collaboration. While most BI tools focus on the first phase, DSP Products are designed from the start with a

bias towards Action, Communication and Collaboration to increase organizational performance addressing all three phases.

## Simple Licensing

DSP has always had a mission of bringing BI to every information worker. A key deliverable in this is our no-nonsense pricing. Our simple licensing schemes make it easy to deploy pervasive Web based solutions throughout your organization without excluding users for cost reasons.

## Features ...

State of the art high performance dashboards including samples and templates for quick prototyping

Web based setup including the innovative drag'n drop "gem and slicer" design tool

Powerful admin tool making control and access easy.

Extensive graphing capabilities including "spark lines"

Support for several flexible collaboration paths such as annotations & viewpoints

Multi level integration with Microsoft Office system 2007

Direct KPI support for SQL 2005 KPI's

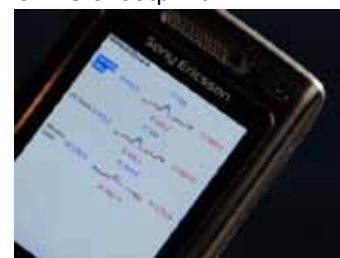

Powerful support for MDX decreasing development time for advanced solutions

Share point canvas for powerful integration with Microsoft Sharepoint

Search canvas integrating enterprise search to make your canvases easy to find

Web 2.0 canvas for "zero footprint"

Mobile canvas giving mobility to your performance dashboards

# What's your canvas?

## Server license – Single

Allows Performance Canvas 2007 for MS SQL to be installed on one application server and one test/development server within one and same corporate entity\*. Support for Microsoft Office SharePoint Server and up to three data connections included. Online license verification.

## Enterprise license - Single

Enterprise version that allows Performance Canvas 2007 for MS SQL to be installed on one application server (support for multiple Microsoft Office SharePoint Servers and data connections) and one test/development within one and same corporate entity\*. Online license verification.

Support for complex environments including:

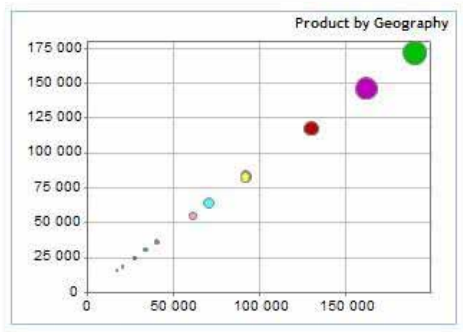

- Advanced highthroughput caching (1000 user+ per server)
- Multi-Processor Support
- Support for Multiple Active Directory Domain
- Server Clustering
- Server Fail-over
- Load Balancing Support

## Enterprise license - Multi

Enterprise version that allows Performance Canvas 2007 for MS SQL to be installed on two application server (support for multiple Microsoft Office SharePoint Servers and data connections) and two test/development within one and same corporate entity\*. Online license verification.

Support for complex environments including:

- Advanced highthroughput caching (1000 user+ per server)
- Multi-Processor Support
- Support for Multiple Active Directory Domain
- Server Clustering
- Server Fail-over
- Load Balancing Support

## Enterprise license - Unlimited

Enterprise version that allows Performance Canvas 2007 for MS SQL to be installed on unlimited application servers within one and same corporate entity\*. (no restriction in support for number of Microsoft Office SharePoint Servers . No License verification needed) .

Support for complex environments including:

- Advancedhigh-throughput caching (1000 user+ per server) - Multi-Processor Support
- Support for Multiple Active Directory Domain
- Server Clustering
- Server Fail-over
- Load Balancing Support

(\*) Including employees in a legal unit (limited to maximum 5000 employees) and external users but not including users in other legal entities within same group through server consolidated environments or similar situations

System requirements :	
	Minimum
Processor	1-gigahertz (GHz) , faster processor recommended
Opera ting System	Windows XP or Vista  Microsoft Windows 2000 or 2003 Server
Memory	1 gigabyte (GB) of RAM or more; 2 gigabyte (GB) or more recommended. Minimum 512 megabytes (MB) RAM free.
Hard Disk	Approximately 150 MB of available hard - disk space for the recommended installation
Internet	Able to communicate externally through port 80 for license verification. NB: Not applicable requirement for Enterprise edition - unlimited
Optional requirements	For Microsoft Share point WSS3 or Moss 2007 is needed  Mobile clients need XHTML 1.1 compatible browser
Environment requirements	MS SQL 2005, Microsoft Internet Explorer 6.0 SP1 or later, Firefox
